About Svalson

Yes, we are the ones making windows slide. You may not be aware of it but our sliding windows and adjustable wind screens can be found everywhere around you. On the terraces of the Champs Élysées, at Shanghai Disney Resort, in underground stations and Dior boutiques, in pharmacies and in the VIP suites of Manchester United's Old Trafford Stadium and also in airports and on your neighbours' balconies.

Svalson was first on the market with electrically operated sliding windows and height adjustable wind screens. And we are still the world leader. It's easy enough to be first, but to continue leading the way, you need to always stay one step ahead of your competitors and always be prepared to offer that little extra. That's what we do!

We invent, develop and own the patents. But that's not the most important thing. The key to being a world leader for 35 years is – at least in my mind – having the best product tailored to customer requirements, at the best price.

Maud Spence
VD, Svalson AB

Cafés & restaurants

Café au Lă® height adjustable windscreen has been specially designed for cafés and restaurants to offer their customers the comfort of a terrace, sheltered from cold winds and harsh weather. Café au Lă® wind screens provide protection against all these elements when necessary, making outdoor dining more comfortable and enjoyable.

Protection and comfort

Consisting of an aluminium frame and soundproof laminated glass, Café au Lă® allows your customers to enjoy your terrace to the full without being subjected to the whims of the wind and it also protects you from unpleasant traffic pollution and noise. It's movable glass is held by a counterweight that allows it to be easily positioned at the desired height. Café au Lă® can be combined with protection from the sun such as a parasol or a pergola for even greater comfort.

Features & benefits

Highly resistant laminated glass surface

Make use of the glass for your brand or logotype

Sturdy and easy-to-use windscreen

Reducing the sound from the street

Lock with key as an option

Open terrace or glassed-in restaurant on your choice

Domestic use

With Cit i Lă® in your patio, you can enjoy more outdoor activities with your friends and family during early spring and even late autumn. With Cit i Lă®, you have the option of an open veranda when the weather is nice and sunny. Just raise up the adjustable screens when you need protection from harsh weather and cold winds.

Height adjustable glazing

The terrace screen system is designed to make it easy and flexible to use and can be raised and lowered with a simple grip. Made from aluminium, the standard design is equipped with laminated security glass. Cit i Lă® is available in several variants that all can be combined in the same installation. As a fixed railing, as height adjustable wind screen, with fixed overhead glass or as SPLITT for a complete glassed-in terrace or balcony.

Cit i Lă® has been tested for wind load, personal safety including heavy impacts by the RISE/SP – Research Institutes of Sweden. Cit i Lă® is also approved for installation on balconies and terraces where there is a risk of falls and injuries.

Features & benefits

| Lowered and raised with your fingertip

| Polished glass edges are optional

| Extending the season

| Available in any standard colour

| Clear or translucent glass or frosted film

| Open veranda or protection from cold winds

Complete glazing with maximum opening

SPLITT is a version of height adjustable glazing where you got a complete glazing with maximum opening area thanks to the two movable panels that open both upwards and downwards.

Integrated for optimal solution

SPLITT is suitable for environments where you want to have a complete glazing with maximum protection from unpleasant weather. It is fully compatible with standard Cafe au L   / Cit i L   and can be integrated in the same installation to get the optimal solution.

Features & benefits

Protection from harsh weather and cold winds

Reducing noise level

Complete glassed-in area with maximum view

Maximum width, height and opening

System with many possibilities

Svalson Balcony System is a system with many possibilities. There is a variety of variants that all can be combine with each other based on specific requirements.

Combined to fulfill your needs

Fixed railing, height adjustable wind screen, with fixed overhead glass or SPLITT – all variants can be combined to fulfill your needs. The railing is manufactured as standard in satin anodized aluminum and laminated safety glass. As an option the frame is available in any standard colour and with different glass options or other filling.

Svalson Balcony System has been tested for wind load, personal safety including heavy impacts by the RISE/SP – Research Institutes of Sweden. It is also CE marked according to EN 1090 and thereby approved for installation on balconies and terraces where there is a risk of falls and injuries.

Features & benefits

Fixed railing upgradeable to height adjustable

Tested for wind load and personal safety

Easy to install behind existing railing

CE marked according to EN 1090

Even smarter glazing

Optional extras that can make your existing products more versatile, more attractive and extend the season.

All products are manufactured in Svalson's factory in Sweden and are suitable for your Cit i Lå® / Cafe au Lå® glazing.

More glass - less profiles

Our height adjustable glazing is available with polished glass edges and counterweight in glass. Polished glass edges adds a new dimension to the view and is also very aesthetically good looking. Several variants are available, upper and/or lower edge of moving glass, on fixed glass and on fixed overhead glass.

Fixed railing or complete glassed-in terrass

A fixed railing is a good alternative where part of the terrace is already sheltered and there is no need for a height adjustable wind screen. The railing is provided with a neat railing profile for a sophisticated look. If need arises, the fixed railing can be upgraded and provided with a height adjustable glass.

With fixed overhead glass you get a complete glassed-in terrace or balcony and the rain diversion rubber profile stops the water to come through. Fixed overhead glass can be installed on existing glazing and is easy to remove if desired.

Personalize the glazing with foil or panels

As standard, the height adjustable glazing is provided with laminated, clear safety glass and as an option there are several alternatives available. For example polished glass edges, opalescent or grey glass, plain or patterned frosted film, with brand logo and VIVIX® Architectural panels.

A door with a view

Make the installation complete with a robust door in the same design – height adjustable. The standard width for a door opening is 800 mm. It's also available as a double door and you can choose between laminated glass or polycarbonate.

Accessories

Shark fin
set of 4 pcs.

Clamping foot
set of 2 pcs.

Big foot
set of 2 pcs.
